

Social Media PowerPoint Template Guidelines

Important Notice

- It is essential that the new brand guidelines have been read and understood before using these templates.
- Ensure that the new brand font, Open Sauce Sans, has been installed. If not please reach out to the global brand team.

1. Understanding the Template Layout

- Each slide is pre-formatted to match the correct dimensions for different social media platforms (Facebook, Instagram, X, LinkedIn).
- The placeholders are already sized for square, portrait, and landscape formats.
- Keep all important elements (text/logos) inside the safe zone to avoid cropping.

2. Adding an Image

- Click on the image placeholder (dashed box or icon).
- Select 'Insert Picture' from the menu
- Choose an image from your files (downloaded from brand centre).
- The image will automatically fit into the placeholder.
- If needed, adjust by double-clicking and using the 'Crop' tool to reposition.

3. Editing Text

- Click on the text box and type in your content.
- Make sure Open Sauce Sans is shown correctly in the text box.
- Keep text short and readable (avoid tiny fonts).
- Only use Open Sauce Sans as the font for all public-facing content.

4. Saving Your Design as an Image

- Once your design is ready, go to 'File' > 'Save As'.
- Choose 'PNG' or 'JPG' (recommended for social media).
- Select 'Just This Slide' to export the current design.
- Your image is now ready to upload to Facebook, Instagram, LinkedIn, or X!

5. Best Practices

- ✔ Use high-quality images from our Brand Center only to avoid pixelation.
- ✔ Non-stock images are preferred over stock images. If stock images are needed, use the ones available in the Brand Center.

- ✔ Keep text short & centered for better readability.
- ✔ Check how it looks on a phone before posting.
- ✔ Avoid stretching images—use the crop tool instead.

6. Using Unity Graphic Devices

- The Unity Sphere and Unity Ring are official brand elements available in the Brand Center.
- Always follow the pre-made template style when using these graphics.
- The Unity graphic devices are already included in the PPT social media templates.
- They can be used as-is or serve as inspiration for posts, Reels, and other content.

7. Using the Unity Gradient Background

- Balance the use of Unity Gradient Backgrounds and photography-based images within social media presence at a 50/50 ratio.
- This balance ensures brand harmonization and a consistent visual flow.
- The Unity Gradient works well without additional imagery, focusing on a graphic design aesthetic.
- The Unity Gradient Bar must be included in every piece of content posted on social media.

That's it! You're ready to create
